

# Guest Charging Access Code

## Drive Usage with Customizable Discount Codes for Charging

### Benefits

A self-manageable charging code to be offered to a guest for free, app-less charging. Attract high-quality guests and visitors with this premium, eco-friendly amenity.

### Scenario

As they do with passcodes placed on reception desks for free access to Wi-Fi access points, hotels and other properties are able to provide EV charging service as a unique complimentary perk for their VIP or distinguished guests. Once customers receive their access code, no time-consuming application downloads or complicated installation process is needed. They can charge their vehicle with three simple steps: SCAN, INPUT, and CHARGE. This access code can be offered at the concierge for customers to charge on their own, or it can be made available at the valet parking booth for valet staff to be able to charge the EVs of VIPs.

On the hotel side, you can easily collect all the charging history data specific to sessions using the free access code. Businesses can analyze this usage when planning future operations.

### How-to

- The administrator logs in to ABM EV OS to generate or change the access codes.
- EV drivers scan the QR code on the charger and leverage this code for free app-less charging.
- The administrator tracks the usage on ABM EV OS.

### Key Features

- App-less charging.
- Management console for self-generating the access code.
- Management tag for tracking access code usage.
