

Prepaid E-Card

Effortless Budgeting and Enhanced User Experience

Overview

With Prepaid E-Cards, offer an effortless charging experience for drivers who want to budget their charging spending. This tool enables a single transaction payment that can then be spread across multiple charging sessions. Set different values to sell to customers or to give away as part of promotions. Drivers then add the value to their membership account and use it for charging until the balance runs out. Adding credits afterward to continue charging is easy.

Key Features

- Recharge after using up the amount; easily continue using the same card.
- Minimize fees by eliminating the transaction fees charged by the payment gateway provider.
- Manage multiple aspects of charging, such as number of users and their access.
- Enhance cash inflow to support the EV charging business.

Usage

Provide residents, customers, or employees with a simple way to access charging. Instead of requiring consistent credit card use, offer a simple card for a specified amount. This is also a great way to offer discounts, rewards, and promotions.

Prepaid E-Cards are also a convenient tool for network operators. Capture a bigger audience by easing the practical usage of your EV chargers. Offer a simple card bound to the ABM app: no credit card information required.
